- ✓ Distinctive look & feel
- ✓ Durable and indestructible
- ✓ Tear-resistant, dirt- and water-repellent
- ✓ Connects your brand with security and care

ScanSafe® – the new way of combining data protection with brand image.

ScanSafe® – a great brand messenger!

ScanSafe® products stand for security and care, as they protect personal data, which can be stored on chip cards such as credit-, loyalty-, access cards and passports. Even Smartphones, which are equipped with a radio chip, are protected from unauthorized access. The three-layer ScanSafe® material **blocks 99.99% of radio waves** and keeps personal data secure.

However, ScanSafe® is not only highly protective, but also very good looking. The outer layer is made from DuPont™ Tyvek®, a fabric outstandingly tough and elegant. Its **lustrous look and soft feel** will underline your brand message in the best way.

Anything can be printed on ScanSafe®, from a company logo to a full coverage design; there are no limits to creativity. Fitting in every wallet, pocket or bag, the design will be **perceived day by day**.

But Tyvek® can do even more: as it is dirt-, dust resistant, antistatic and robust, it provides the very best protection for important data and documents.

No other fabric offers this **unique combination of elegance and strength!**

WALLETS

A particularly light and thin wallet, which is completely equipped with anti-RFID protection. It offers four slots for credit cards, bank cards or customer cards and a large pocket for banknotes.

PASSPORT SLEEVES

Biometric passports are equipped with a chip, on which personal data are stored. ScanSafe® passport sleeves protect against data theft. They provide space for one passport each.

TRAVEL DOCUMENT WALLETS

Important travel documents such as passport, boarding pass, car keys and credit cards can be stored safely in one place. The documents are easy to access thanks to the hook & loop fastener.

CAR KEY WALLETS

Car keys, which have been provided with a radio chip, also need protection from unauthorized access. The ScanSafe® wallets offer enough space for a car key with key holder. They are equipped with a hook & loop fastener.

PHONE SLEEVES

To enable mobile phones for contactless payments, they are equipped with an NFC antenna and an NFC SIM card. The stored data is protected against hackers, if the phone is kept in a ScanSafe® phone sleeve. The case also protects the display from scratches and stands out due to the special design.

CREDIT CARD SLEEVES

ScanSafe® sleeves for one chip card, e.g. credit-, insurance-, loyalty- and access cards as well as ID cards. The flat sleeves fit into standard wallets and card holders.

CREDIT CARD WALLETS

ScanSafe® wallets offer space for several cards, yet they are small and handy. The hook & loop closure allows quick opening and closing.
